Profesionals Projects

AirBnB Clone Flask

This project is the fourth version of an AirBnB website clone. It features a console and an API to manage program data. Users can create, update, and destroy objects, as well as manage file storage. The project supports both JSON serialization and MySQL as the database, and it includes a Flask implementation for the web framework.

Files Manager NodeJS

This project covers authentication, NodeJS, MongoDB, Redis, pagination, and background processing. The goal is to build a simple platform for file upload and viewing, with features including user authentication via token, file listing, file upload, permission changes, file viewing, and thumbnail generation.

TeamTracker Django

TeamTrack is a web-based project management tool that helps teams collaborate, track progress, and manage tasks efficiently. It provides a user-friendly interface with features like project planning, task assignment, progress tracking, and Gantt chart visualization.

Sivarus React/Express JS

This project is an Ecommerce Website built using Express.js, ReactJS, MongoDB, and ViteJS. The platform includes features such as product listing, user authentication, shopping cart functionality, and order management.
